

# *Starter & Foliar Feed Fertility*

**CleanGreen®**

**P.G.S.**

*Plant Growth Stimulant*

## **General Information:**

The contents of PGS are extracted from the cells of *Ascophyllum Nodosum* using a unique **proprietary technology**. Many of the most beneficial and active ingredients can be damaged by most other conventional processing. Our extraction processes are the **least destructive of any** because we do not dissolve *Ascophyllum Nodosum* into a solution. It is the naturally-occurring carbohydrates, polysaccharides, organic acids, amino acids, vitamins, proteins, lipids, enzymes, and macro and micronutrients which play key roles in boosting all aspects of plant growth and development.

## **PGS has been shown by independent research to improve:**

- Plant health and physiological fitness
- **Improve Yields**
- Photosynthesis
- Chlorophyll content
- **Drought tolerance**
- Plant antioxidant levels
- Cell wall strength
- **Stress tolerance**
- Resistance to diseases

Because the *Ascophyllum Nodosum* are such remarkable plants, and take up nutrients from the ocean directly, they are an incredibly rich source of every nutrient known to contribute to plant growth and health — **all in perfect balance.**
